

This listing of claims will replace all prior versions, and listing, of claims in the application:

Listing of Claims:

B.3 1. (Original) A cable support apparatus for a raised floor system, which comprises:

a plurality of support members [being adapted to attach one each to a portion of a support pedestal of a raised floor system at a vertical displacement below an uppermost surface of the support pedestal,] and

a cable support basket [adapted to depend from the plurality of support members so as to form a portion of a cable support pathway,] wherein the cable support basket is configured and dimensioned to have a length and width [which define an area less than that of a floor panel of the raised floor system, such that when the floor panel is removed the cable support basket may pass through the opening formed in the raised floor system by the removed floor panel.

2. (Original) The cable support apparatus according to claim 1, wherein the cable support basket includes a plurality of intersecting elements secured together in a substantially planar arrangement to support cables thereon.

B3)
(cont)

3. (Original) The cable support apparatus according to claim 2, wherein the cable support basket further includes vertical element portions formed along at least one side to facilitate containment of cables placed on the plurality of intersecting elements.

4. (Original) The cable support apparatus according to claim 2, wherein the plurality of intersecting elements are formed from wire stock.

5. (Currently Amended) The cable support apparatus according to claim 1, wherein the cable support basket is configured and dimensioned such that upon installation in conjunction with ~~[[the]]~~ a raised floor system, the cable support basket is disposed vertically beneath a corresponding floor panel of the raised floor system.

6. (Original) A cable support apparatus for a raised floor system, which comprises:

four support members being adapted to attach one each to a portion of a support pedestal of a raised floor system at a vertical displacement below an uppermost surface of the support pedestal; and

a cable support basket adapted to depend from the four support members so as to form a portion of a cable support pathway, wherein the cable support basket is configured and dimensioned to have a length and width which define an area less than that of a floor panel of the raised floor system, such that when the floor panel is removed the cable

support basket may pass through the opening formed in the raised floor system by the removed floor panel.

7. (Original) The cable support apparatus according to claim 6, wherein the cable support basket includes a plurality of intersecting elements secured together in a substantially planar arrangement to support cables thereon.

8. (Original) The cable support apparatus according to claim 7, wherein the cable support basket further includes vertical element portions formed along at least one side to facilitate containment of cables placed on the plurality of intersecting elements.

9. (Original) The cable support apparatus according to claim 7, wherein the plurality of intersecting elements are formed from wire stock.

10. (Currently Amended) The cable support apparatus according to claim 6, wherein the cable support basket is configured and dimensioned such that upon installation in conjunction with ~~[[the]]~~ a raised floor system, the cable support basket is disposed vertically beneath a corresponding floor panel of the raised floor system.

B3
cont

11. (Currently Amended) A cable support apparatus for use in a raised floor system that includes a plurality of support pedestals arranged in a matrix and a plurality of floor panels supported by the plurality of support pedestals a distance above a base, the cable support apparatus comprising:

a plurality of support members each being configured and adapted to be supported by a respective support pedestal of the raised floor system at a distance spaced from an uppermost surface of the respective support pedestal; and

a plurality of cable support baskets each being configured and adapted to [[be suspended on]] depend from at least a pair of adjacent support members.

12. (Original) The cable support apparatus according to claim 11, wherein each of the plurality of cable support baskets includes at least one stringer element configured and adapted to be suspended from a pair of adjacent support members.

13. (Original) The cable support apparatus according to claim 11, wherein each of the plurality of cable support baskets includes a pair of parallel spaced apart stringer elements each being configured and adapted to be suspended from a pair of adjacent support members.

14. (Original) The cable support apparatus according to claim 13, wherein each of the plurality of cable support baskets includes a plurality of transverse support sections extending between the pair of stringer elements.

B3
contd

15. (Original) The cable support apparatus according to claim 14, wherein each of the plurality of cable support baskets is an open architecture.

16. (Original) The cable support apparatus according to claim 14, wherein each of the plurality of cable support baskets is configured and adapted to support articles on a plane below the pair of stringer elements.

17. (Original) The cable support apparatus according to claim 14, wherein each transverse support section of each of the plurality of cable support baskets includes a riser portion depending from each of the pair of stringer elements and a transverse portion extending between the riser portions.

18. (Original) The cable support apparatus according to claim 17, wherein each of the plurality of cable support baskets includes a longitudinal section extending across the transverse portions of the transverse support sections.

19. (Original) The cable support apparatus according to claim 18, wherein at least one transverse support section is formed of wire stock.

20. (Original) The cable support apparatus according to claim 19, wherein at least one longitudinal section is formed of wire stock.

B3
contd

21. (Currently Amended) The cable support apparatus according to claim 17, wherein each of the plurality of support members are spaced a distance from an uppermost surface of ~~[[a respective]]~~ at least one of the plurality of support ~~[[pedestal]]~~ pedestals.

22. (Currently Amended) A cable support apparatus for use in a raised floor system that includes a plurality of support pedestals arranged on a base and a plurality of floor panels supported by the plurality of support pedestals a distance above the base, the cable support apparatus comprising:

at least one cable support basket being configured and adapted to support an article thereon, the at least one cable support basket including a pair of stringer elements and a plurality of transverse support members extending between the pair of stringer elements; and

a plurality of pedestal adapters being configured and adapted to attach one each to a respective support pedestal, wherein each ~~of the plurality of pedestal adapters is configured and adapted to support a portion of a~~ cable support basket ~~[[thereon]]~~ is adapted to depend at least partially from at least one of the pedestal adapters.

23. (Original) The cable support apparatus according to claim 22, wherein each transverse support member of each cable support basket includes a pair of riser portions depending from a respective stringer element and a transverse portion extending between the distal ends of the pair of riser portions.

B3
(contd)

24. (Original) The cable support apparatus according to claim 23, wherein each cable basket includes at least one longitudinal member extending across the transverse portions.

25. (Original) The cable support apparatus according to claim 24, wherein the longitudinal members and the transverse support members define an open architecture.

26. (Original) The cable support apparatus according to claim 23, wherein each pedestal adapter supports at least an end of two adjacent stringers of two adjacent cable support baskets.

27. (Currently Amended) The cable support apparatus according to claim 26, wherein the pedestal adapter is spaced a distance beneath an uppermost surface of [[a respective]] at least one of the plurality of support [[pedestal]] pedestals.
